

Arch / Artix Linux

Use “yay” instead of yaourt! yaourt is outdated. (<https://github.com/jguer/yay>)

Install Yay

[Install and Use Yay on Arch Linux](#)

Useful commands

Remove unneeded dependencies using pacman

```
pacman -Rsn $(pacman -Qdtq)
```

Remove unneeded dependencies using yay

```
yay -Yc
```

Install local pkg.tar in Arch Linux

```
pacman -U .pkg.tar.gz or .pkg.tar.xz
```

Create a list of user installed packages without dependencies

Without AUR packages

```
pacman -Qgen > pkglist.txt
```

Only AUR packages

```
pacman -Qgem > pkglist_aur.txt
```

Install packages with Yay from a list contained in a text file created with the command above

```
yay -S --needed - < pkglist.txt
```

Check which package owns a file

```
pacman -Qo file
```

Check which package provides a file

```
pacman -F file
```

Show files of a package

```
pacman -Ql package
```

Remove a package from Pacman without deleting files

```
pacman -R --dbonly package
```
